FORMICA
for Kitchens

Formica on sink and counter tops has become a near standard feature in modern residential construction. For color, for long wear, for ease of cleaning, for all its "fun to live with" qualities, Formica has won first place in the hearts of America's Homemakers.

Since Formica is such a very rugged material it is natural to consider it first for the areas where wear is the greatest. But Formica is often well used in many other places in the kitchen, too.

Don't overlook the design possibilities of Formica on window sills, doors, and ventilating hood. Cabinet fronts of Formica are forever free of dirty finger prints—never

need painting and are easily wiped clean of cooking grease.

Conventional back splash treatment often gives way to Formica in matching or contrasting color on the wall from sink top to base of overhead cabinets.

Built-in dinettes are a popular Formica feature.

With the "open" kitchen gaining in popularity, Formica wood grains that tie in with dining room furniture should be considered. A "convertible" kitchen is easy to have by simply using a Formica dropleaf wall area which opens to a serving table between the two rooms or closes for two completely separate units.

FORMICA

in the Bathroom

When Formica pioneered the idea of the counter top lavatory just a few short years ago, we never suspected what a bathroom design revolution would develop.

We were seeking a new application for Formica and the Vanitory® was conceived as a novel device to get Formica into another room of the home.

The basic idea has now been embraced by homemakers and equipment manufacturers alike and is being executed in many different materials. Today as in the beginning, your reasons for using genuine Formica in the bathroom are every bit as sound as the design idea itself.

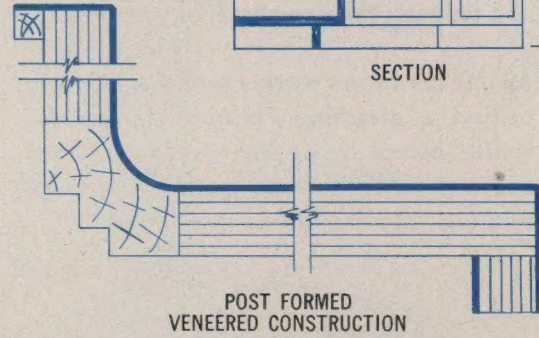

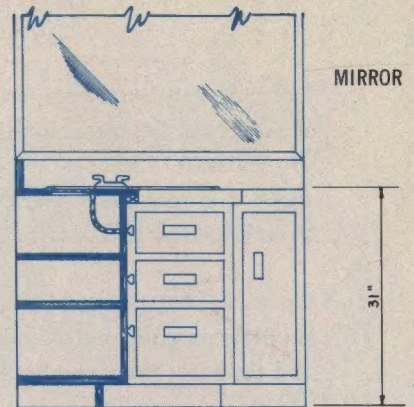

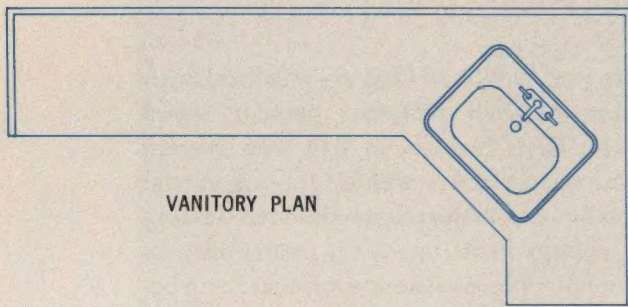

No other material combines the colors,

patterns, resistance to cosmetic stains and hard use found in Formica. Its super-smooth, warm-to-the-touch surface is free of germ catching grout lines—wipes clean with a damp cloth.

Several well known manufacturers offer standard Vanitory units at modest prices. Bowls especially adapted for use with a Formica top are available from the best fixture houses for custom units.

The versatility of Formica should encourage you to consider such features as built-in medicine chest, laundry hamper, towel storage, step-up for children, multiple bowls, fold down cosmetic section and magazine rack.

CONSTRUCTION DETAILS FOR VANITIES

FORMICA

for Food & Beverage Service

In the restaurants, bars, and soda fountains of America, Formica, as it is known today, got its start. Chances are anyone who has eaten a single meal away from home has been exposed to Formica.

Formica has universal acceptance for the smallest corner neighborhood restaurant and the most exclusive hotel or private club.

Many a restaurant worker today serves from behind a gleaming Formica counter installed before he or she was born. Tried and true as to wearing qualities, there is nothing "old hat" about this material.

The very newest in high style colors, intriguing modern patterns, popular wood grains keep Formica in step with current fashion and future trends. In commercial installations subject to possible remodeling or enlargement, the ready availability of material with consistent color matching becomes an important Formica asset.

From a standpoint of customer attracting beauty, sanitation, long wear, or easy maintenance Formica dominates today as it has for many years.

FORMICA for Walls, Doors and Window Stools

The most satisfactory Formica wall paneling for commercial applications calls for 1/16" material veneered to plywood. These slabs may be applied in small blocks or up to full 4' x 10' panels over grounds or furring.

A large variety of design treatments are practical using revealed-setback splines, concealed joint fastening and decorative scoring of panels.

Formica doors can be either solid or hollow core. If used for exterior doors, they must be sheltered by a marquee or set back from direct weathering. Theatres and public buildings where human traffic is heavy, find completely faced Formica doors more practical than just push and kick plates alone.

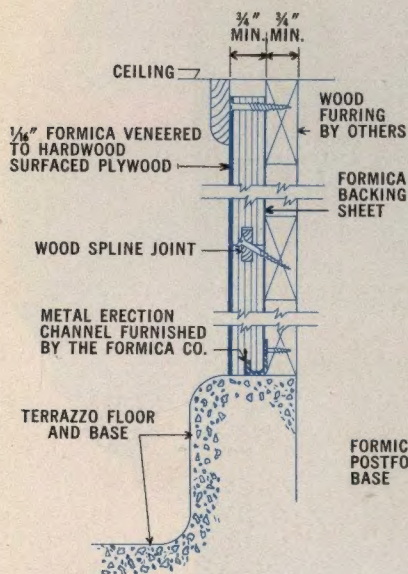

Toilet partitions and doors of Formica have gained in favor because of ease of cleaning and other sanitation features.

Formica window stools offer many advantages for their color, durability and low cost maintenance. They are easy to cut and fit on the job by ordinary carpenter labor.

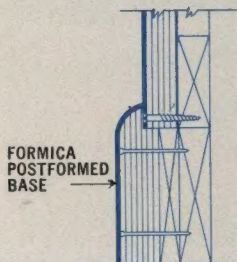

Illustrated at the bottom of the next page is a typical hotel installation with Formica front as well as top. This stool houses the room air conditioner.

Sheet Sizes

Only Formica offers such a wide selection of sheet sizes.

WIDTH	LENGTH
24" —	60", 72", 84", 96", 120"
30" —	60", 72", 84", 96", 120"
36" —	60", 72", 84", 96", 120"
48" —	96", 120"

Grades and Finishes

Formica is available in both standard and cigarette-proof grades. Only standard grade Formica is recommended for sink top applications. The lower cost of standard grade together with its resistance to cigarette burns has made it most popular for all jobs but those subjected to extreme smoking conditions.

Two Formica Finishes

Polished finish has a high mirror gloss and satin finish is a softer buffed sheen.

Postforming Stock

A special type of Formica is available for bending to a small radius. Many fabricators specialize in this work which requires controlled heating of the Formica.

Recommended limits of bending are $\frac{1}{2}$ " I.D. and $\frac{3}{4}$ " O.D. Larger radii needed for solid colors. Both standard and cigarette-proof grades and satin and polished finish are available in postforming stock.

Protective top sheet saturated with Melamine Resin.

Printed decorative sheet saturated with Melamine Resin. In Realwood this layer is a thin veneer of actual wood.

Sheet of metal foil used only in cigarette-proof Formica.

Multi-layer core of strong kraft paper impregnated with Phenol-Formaldehyde Resin. It's tough. Dimensionally stable.

HOW TO IDENTIFY GENUINE

FORMICA

The only thing *like* Formica is Formica itself. The name is a registered trade-mark of the Formica Company, Cincinnati, Ohio.

For your protection against substitution every sheet of genuine Formica now has this wash-off identification printed on the face.

DEMAND THIS CERTIFICATION

This mark certifies genuine
REMOVE WITH SOAP AND WATER

Seeing is believing. If this wash-off identification is not on the sheet, it's not Formica.
